TRADEMARK NITROGEN INCREASES PRODUCTION OF MAG NITRATE

Expanded Mag Nitrate Production Reduces Mg Deficiencies around the Country

Tampa, Florida (March, 25, 2015) – TradeMark Nitrogen Corp. announced an expansion of their magnesium nitrate production last week. Through the addition of various components to their magnesium nitrate plant, TradeMark Nitrogen was able to double the production of their Magnesium Nitrate Solution and provide more of this vital product to various fertilizer distributors and retailers throughout the country. The focus on a balanced nutritional program is emphasized today more than it has ever been in the past. Magnesium, specifically, and its role in the production in chlorophyll, has led to an increased usage of magnesium nitrate solution to satisfy the nutritional needs of numerous crops throughout the United States.

In addition to the expansion, TradeMark Nitrogen has also upgraded its formulation for their magnesium nitrate solution from 7-0-0-6% Mg, to 7.2-0-0-6.3% Mg. This change was made to better reflect the changing nutritional needs of various crops throughout the United States. “More and more, growers are utilizing the 4 R’s to make sure their crops are receiving the right source, at the right rate, at the right time and in the right place,” said Mike Barry, President at TradeMark Nitrogen. Magnesium nitrate solution provides growers with a significant source of magnesium that is able to be absorbed into the plant both in an efficient and effective manner.

About TradeMark Nitrogen Corp.

TradeMark Nitrogen Corporation is a wholesale manufacturer, seller and distributor of bulk commodities for agricultural and industrial customers throughout the U.S. With over 30 years of experience in the fertilizer industry, our highly trained staff has earned a reputation for reliability and performance.
